PROFESSIONAL SUMMARY

AI product engineer and founder of an App Store product used by 400+ people. Builds AI systems, translates user feedback into product improvements, and owns reliability after launch.

EXPERIENCE

Founder & AI Product Engineer **Jun 2025 - Present**

SelahNote

- Built and launched a sermon-note app in two months as its sole engineer, growing it to 400+ users.
- Built live transcription and source-grounded voice Q&A to help people understand and apply sermon teaching, using AssemblyAI and OpenAI agents.
- Translated user feedback into Bible navigation improvements, bringing scripture access forward and adding familiar swipe gestures.
- Resolved a user-reported startup crash in Convex synchronization, preserving notes during duplicate-ID recovery and adding regression tests.

AI Engineer **Nov 2025 - Present**

Cognizant

- Proposed and built a synthetic-data prototype for representative test data without copying personal data, using profiles and business rules to model outliers and cross-column/table dependencies.
- Fine-tuned DistilBERT, increasing sentiment-analysis accuracy by 25 percentage points.
- Executed ETL regression testing across hundreds of millions of records to identify data defects before production.

Software Engineering Intern **Jul 2023 - Sep 2023**

The Difference

- Built a fitness website from Figma designs using WordPress, HTML, and CSS. Evaluated technologies for the app-to-web migration and delivered two dynamic front-end applications.

SELECTED PRODUCTS & PROJECTS

V1 ProdBot | V1 Church **Sep 2026**

- Built a functional AV troubleshooting prototype to help volunteers across seven campuses resolve issues using campus-specific guidance, designed to reduce dependence on limited specialist support.
- Added source-grounded answers and a documentation approval workflow so production staff can review AI drafts and track revisions.

AI Teleprompter **Mar 2026**

- Built a voice-following teleprompter in a four-hour challenge using WebSockets, embeddings, and alignment for skips and ad-libs. Ranked in the top 5% of applicants.

MunchMap | 1st Place, Headstarter Hackathon **Feb 2024**

- Won first place at the Headstarter Hackathon by building a food-donation application with a three-person team and demonstrating it live to 200+ attendees.

SKILLS

Languages: Python, JavaScript, TypeScript, Swift, SQL, Java, C++
AI/ML: LLM applications, RAG, AI agents, embeddings, DistilBERT, LangGraph, Pinecone
Product & Infrastructure: React, Next.js, FastAPI, Django, AWS, Docker, WebSockets, Convex

EDUCATION

Bachelor of Science in Computer Science **Jun 2024**

City University of New York (CUNY), Hunter College
